

SLD1023S - January 19, 2018

Item # SLD1023S was discontinued on January 19, 2018. For informational purposes, this is a copy of the website content at that time and is valid only for the stated product.

SUPERLUMINESCENT DIODES (SLDS)

- ▶ Broadband Emission Centered at 830, 1050, 1280, 1310, 1325, or 1550 nm
- ▶ Near-Gaussian Spectrum
- ▶ Low Ripple
- ▶ Butterfly Package

SLD1018S
Butterfly Package

SLD1550S-A2
Superluminescent Diode
Mounted in a CLD1015 Compact
Laser Diode Driver with TEC

OVERVIEW

Features

- Center Wavelength at 830, 1050, 1280, 1310, 1325, or 1550 nm
- Typical 3 dB Bandwidths Ranging from 20 to 110 nm
- 14-Pin Butterfly Package
- Pigtailed with at Least 1 m of SM or PM Fiber
- 2.0 mm Narrow Key FC/APC Connector
- Integrated TEC and Thermistor

Recommended Controller / Mount Options			
Item #	Mount	Diode Driver	TEC Controller
CLD1015	✓	✓	✓
LM14S2	✓	-	-
ITC4000 Series	Use with LM14S2 Mount	✓	✓
LDC200 Series	Use with LM14S2 Mount	✓	-
TED200C	Use with LM14S2 Mount	-	✓

Superluminescent Diodes (SLDs) are excellent high-power, broadband light sources that are ideal for use in applications such as Optical Coherence Tomography (OCT) Imaging Systems and Fiber Optic Gyroscopes (FOG). The butterfly-packaged SLDs offered here are indium phosphide (InP) devices manufactured by Thorlabs' Quantum Electronics (TQE).

Each device is built into a 14-pin butterfly package with an integrated thermoelectric cooler (TEC) and thermistor to ensure output stability. The output is coupled into an SM or PM fiber terminated with a 2.0 mm narrow key FC/APC connector. Raw test data for each SLD is also available upon request; please contact Tech Support with inquiries.

Thorlabs is able to provide low-ripple SLDs with custom wavelengths or higher power diodes. Please note that the engineering design and wafer manufacturing costs involved make the purchase of low quantities very costly. For a quote on custom SLDs, please contact Tech Support.

A selection of the SLDs sold here are also available as benchtop sources. For more information, see the *Selection Guide* tab.

SPCS

The center wavelength with these devices is defined by an average weighted by the relative amplitude and may not correspond to peak power or the FWHM center wavelength due to the variability of the spectrum shape. For a given Optical Spectrum Analyzer (OSA) trace:

$$CW = \frac{\sum X_i Y_i}{\sum Y_i}$$

where

- X_i is the Wavelength of a Trace Data Point
- Y_i is the Amplitude of a Trace Data Point
- CW is the Specified Center Wavelength

The ASE power is the output from the fiber pigtail.

830 nm Superluminescent Diodes

Item #	SLD830S-A10			SLD830S-A20		
Parameter	Min	Typ.	Max	Min	Typ.	Max
Operating Current	-	-	150 mA	-	-	200 mA
Center Wavelength	820 nm	830 nm	840 nm	820 nm	830 nm	840 nm
ASE Power ^a	10 mW	13 mW	-	20 mW	22 mW	-

- a. The center wavelength with these devices is defined by an average weighted by the relative amplitude and will not correspond to peak power or the FWHM center wavelength due to the variability of the spectrum shape.
- b. Basic laser diode operating characteristics can be measured by increasing current (I) while measuring the device voltage (V) and light output (L). The resulting data is usually referred to as an LIV curve.

830 nm Superluminescent Diodes

In order to support OCT imaging applications, these SLDs are designed with a low gain ripple no larger than 0.15 dB (RMS) and a typical ripple value 0.03 dB (RMS). More information on Thorlabs' SLDs for OCT systems can be found [here](#).

1325 nm Superluminescent Diode

The SLD1325 is designed to have a broad bandwidth of >100 nm for improved resolution when used in Spectral Domain Optical Coherence Tomography (SD-OCT) systems. This SLD is packaged with an integrated TEC and thermistor for temperature control, as well as an optical isolator for enhanced optical stability. More information on Thorlabs' SLDs for OCT systems can be found [here](#).
