

## DCC1545M - August 12, 2020

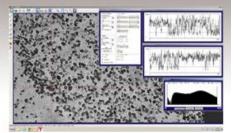

Item # DCC1545M was discontinued on August 12, 2020. For informational purposes, this is a copy of the website content at that time and is valid only for the stated product.

CMOS CAMERAS: USB 2.0 AND USB 3.0

- ► Color, Monochrome, or NIR Sensors
- ► Versions with Global Shutter and Trigger Available
- ► 1.3 Megapixel Sensors
- ▶ USB 2.0 or USB 3.0 for Fast Data Acquisition

GUI and Software Package Included

### OVERVIEW

### **Features**

- Easy to Use in a Wide Range of Applications from Microscopy to Monitoring
- 1.3 Megapixel (1280 x 1024 Pixels) Monochrome, Color, and NIR CMOS Sensors
- Available with Global Shutter and External Trigger
- ThorCam<sup>™</sup> Software for Windows<sup>®</sup> 7 and 10 Operating Systems
- SDK and Programming Interfaces Provide Support for:
  - C, C++, C#, and Visual Basic .NET APIs
  - LabVIEW, MATLAB, and µManager Third-Party Software

These compact, lightweight CMOS cameras are available with either a monochrome (M models), color (C models), or NIR (N model) sensor. They can be used in a wide range of applications from microscopy to monitoring. Our CMOS cameras offer a full-frame resolution of 1280 x 1024 pixels. All camera series are controlled and powered via a standard 5 V USB 2.0 or 3.0 port.

# SM1 Thread Compatibility C-Mount Threads Internal ND Filter not included C-Mount Threads SM1 Threads External Cage Plate not included

Compatibility of

the C-Mount CMOS Cameras with Thorlabs' SM1 internal or external threadings. Our CS-Mount Cameras feature the same compatibility.

The DCC1545M and DCC1645C compact CMOS cameras have an electronic rolling shutter and their small footprints make them ideal for applications where space is a premium. The DCC1240 and DCC3240 high-sensitivity CMOS cameras include CMOS sensors that allow for switching between rolling and global shutter mode, offer a considerably higher dynamic range, and include an input for an external trigger. A brief comparison of the features available in each model is presented in the table below. For a detailed list of specifications, see the *Specs* tab.

For quantitative applications requiring low noise, high quantum efficiency cameras, consider our Quantalux  $^{\otimes}$  sCMOS and Kiralux  $^{\top}$  CMOS Cameras.

**USB** and Trigger Cables

For the DCC1240 cameras, optional CAB-DCU-T1 and CAB-DCU-T2 USB and trigger cables allow one to use the additional trigger input and output ports (T1 and T2) of these cameras together with the USB 2.0 connection. The exposure and readout/transfer events of the camera can be initiated via the input trigger, and external events like strobe lights can be triggered by the camera using the output trigger. The CAB-DCU-T3 GPIO cable can be used with the USB 3.0 cameras as an additional means of connecting and triggering peripheral devices. The trigger configuration (i.e., the source of the input trigger and the timing for the output trigger) can be set via the provided software or the LabVIEW drivers.

### Software

Each camera also comes with ThorCam, our Windows-compatible GUI software package. Standard drivers like Direct Show (WDM) and .NET are provided and offer support for LabVIEW. An extensive SDK is available. The C/C++ drivers can additionally be imported to Matlab using MEX files.

| Temperature         | 23 to 122 °F (-5 to 50 °C)  |
|---------------------|-----------------------------|
| Storage Temperature | -4 to 140 °F (-20 to 60 °C) |

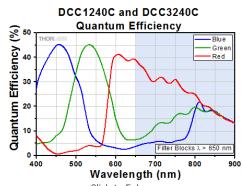

- ADC = Analog-to-Digital Converter
- Please see the Graphs tab for more information.
- · Requires maximum pixel clock frequency.
- · Requires minimum pixel clock frequency.
- Please note that CS-Mount and C-Mount lens mounts both use 1.00"-32 threads but feature different flange-to-sensor distances.
- · Be careful not to thread a screw longer than the depth of the tap into the camera housing, as this could lead to damage.
- A USB 2.0 connection can be used, but will significantly decrease the frame rate and will be limited to 8-bit depth operation.
- The power consumption depends on the sensor model and the pixel clock setting.

### GRAPHS

Graphs of the camera response as a function of wavelength are presented here as a comparison between the different camera lines available on this page. Individual sensitivity curves are provided in the tables below.

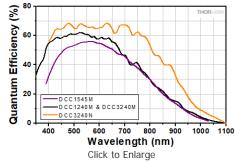

The shaded blue region above 650 nm represents wavelengths blocked by a built-in IR shortpass filter.

### SOFTWARE

### **ThorCam™**

### **Software**

Version 3.4.1

Click the button below to visit the ThorCam software page.

Click to Enlarge ThorCam Graphical User Interface (GUI)

ThorCam is a powerful image acquisition software package that is designed for use with our cameras on 32- and 64-bit Windows® 7 or 10 systems. This intuitive, easy-to-use graphical interface provides camera control as well as the ability to acquire and play back images. Single image capture and image sequences are supported. Application programming interfaces (APIs) and a software development kit (SDK) are included for the development of custom applications by OEMs and developers. The SDK provides easy integration with a wide variety of programming languages, such as C, C++, C#, and Visual Basic .NET. Support for third-party software packages, such as LabVIEW, MATLAB, and μManager\* is available.

\*µManager control of Zelux and 1.3 MP Kiralux cameras is not currently supported. When controlling the Kiralux Polarization-Sensitive Camera using µManager, only intensity images can be taken; the ThorCam software is required to produce images with polarization information.

### **Compact USB 2.0 CMOS Cameras**

- Color and Monochrome
  - Versions Available
- Electronic Rolling Shutter
- USB 2.0 Connection in an Ultra-Compact Housing
- 25 fps in Freerun Mode and over 200 fps with Limited Area of Interest
- Ships with USB 2.0 Cable

The DCC1545M and DCC1645C CMOS cameras operate with only a rolling shutter and feature an ultra-compact dustproof housing. Frame rates up to 250 fps are possible with a limited area of interest and sufficient light conditions. The small footprint and mini USB 2.0 connector at the side of the housing allow usage in setups where space is at a premium.

These cameras feature a CS-mount lens mounting thread. To equip any of our C-mount camera lenses, the included CML05 CS-mount to C-mount extension adapter is required to ensure that the sensor is in the focal plane of the camera lens.

In addition, the DCC1545M and DCC1645C cameras are also shipped with CS-mount to SM1 internal and CS-mount to SM1 external thread adapters. Additional compatible adapters are available at the bottom of the page. Two 1/4"-20 screw adapters are also included to allow the camera housing to be post mounted using 8-32 or M4 standard screws. Please note that larger lenses may need to be supported independently of the camera.

Our color CMOS cameras have an IR shortpass filter that cuts off transmission above 650 nm. Removing the filter will expose the CMOS sensor to the environment, which could result in dust entering the camera and causing the performance to deteriorate. For those who

are very familiar with cameras and sensors, it is possible to change the filter yourself in a cleanroom environment. If you are not

comfortable performing this procedure, please send the camera to Thorlabs where our skilled technicians have the tools to safely remove the filter without damaging the camera. Contact technical support for assistance.

These cameras are compatible with our C-Mount Camera Lenses and High-Magnification Zoom Lenses using the included CS to C-mount adapter. Our standard lenses include fixed focal lengths from 3.5 mm to 75 mm with maximum apertures of up to f/0.95, as well as an 18 - 108 mm focal length, f/2.5 zoom lens. Our high-magnification zoom lenses are a modular system that features magnifications from 0.07 to 28.

The DCC1545M and DCC1645C CMOS Cameras will be retired and replaced by our new Zelux<sup>™</sup> Compact Scientific Cameras when stock is depleted.

If you require a DCC camera for line production, please contact our OEM Team.

### High-Sensitivity CMOS USB 2.0 Cameras with Global Shutter

Click to Enlarge Back of Camera with Input for External Trigger

- Color and Monochrome Versions Available
- Limited
- Global and Rolling Shutter Mode
- USB 2.0 Port Provides Power and Computer Interface
- 25.8 fps in Freerun Mode and up to 98 fps with Limited Area of Interest
- Trigger Input
- Ships with USB 2.0 Cable

The DCC1240M monochrome and DCC1240C color high-sensitivity USB 2.0 CMOS cameras include CMOS sensors that allow for switching between rolling and global shutter mode, offer a high dynamic range and include an input for an external trigger. The cameras are controlled and powered via a USB 2.0 connection. These cameras can achieve frame rates up to 98 fps (reduced ROI).

Each camera is shipped with C-mount to internal SM1 and C-mount to external SM1 adapters (also sold separately below). Taps in the bottom of the camera allow for post mounting with 8-32 or M4 screws.

Our color CMOS cameras have an IR shortpass filter that cuts off transmission above 650 nm. Removing the filter will expose the CMOS sensor to the environment, which could result in dust entering the camera and causing the performance to deteriorate. For those who are very familiar with cameras and sensors, it is possible to change the filter yourself in a cleanroom environment. If you are not comfortable performing this procedure, please send the camera to Thorlabs where our skilled technicians have the tools to safely remove the filter without damaging the camera. Contact technical support for assistance.

Our high-magnification zoom lenses are a modular system that features magnifications from 0.07 to 28.

The DCC1240M and DCC1240C CMOS Cameras will be retired and replaced by our new Zelux<sup>™</sup> Compact Scientific Cameras when stock is depleted.

If you require a DCC camera for line production, please contact our OEM Team.

### Á

### High-Sensitivity USB 3.0 CMOS Cameras with Global Shutter

- Global and Rolling Shutter Modes
- USB 3.0 and GPIO Ports
- 60 fps in Freerun Mode and Capable of 229 fps with Limited Area of Interest
- Trigger Input
- Ships with USB 3.0 Cable

The DCC3240M monochrome, DCC3240C color, and DCC3240N NIR cameras have a USB 3.0 connection for improved performance. Compared to the DCC1240, the DCC3240 cameras are capable of faster frame rates (25.8 fps vs. 60.0 fps in Free Run Mode) and lower trigger delays (as low as 3  $\mu s$  vs 20  $\mu s$ ). Each camera is powered via the USB port and also has two GPIOs (General Purpose I/O) that allow the camera to serve as a trigger for peripheral devices. Faster than the DCC1240 cameras, they can achieve a maximum frame rate of 229 fps (limited ROI).

The front apertures of these cameras feature an internal C-mount thread. The bottom of the housing has a 6 mm deep 1/4"-20 tap, so adapters are included for easy post mounting using either the 8-32 or M4 standard. These cameras can also be connected to SM1-Threaded Lens Tubes using the adapters sold at the bottom of this page.

Our color CMOS cameras have an IR shortpass filter that cuts off transmission above 650 nm. Removing the filter will expose the CMOS sensor to the environment, which could result in dust entering the camera and causing the performance to deteriorate. For those who are very familiar with cameras and sensors, it is possible to change

- · Depends on the PC hardware used.
- Requires maximum pixel clock frequency.
- Please note that CS-Mount and C-Mount lens mounts both use 1.00"-32 threads but feature different flange-to-sensor distances.
- Be careful not to thread a screw longer than the depth of the tap into the camera housing, as this could lead to damage.

the filter yourself in a cleanroom environment. If you are not comfortable performing this procedure, please send the camera to Thorlabs where our skilled technicians have the tools to safely remove the filter without damaging the camera. Contact technical support for assistance.

These cameras are fully compatible with our C-Mount Camera Lenses and High-Magnification Zoom Lenses that are sold separately. Our standard lenses include fixed focal lengths from 3.5 mm to 75 mm with maximum apertures of up to f/0.95, as well as an 18 - 108 mm focal length, f/2.5 zoom lens. Our high-magnification zoom lenses are a modular system that features magnifications from 0.07 to 28.

The DCC3240M, DCC3240C, and DCC3240N CMOS Cameras will be retired and replaced by our new 1.3 MP Kiralux<sup>™</sup> Compact Scientific Cameras (including an NIR-enhanced option) when stock is depleted.

If you require a DCC camera for line production, please contact our OEM Team.

### **Camera Thread Adapters**

Please note that the CML05 CS-Mount to C-Mount Adapter has external and internal 1.00"-32 threading. It allows CS-mount camera bodies, such as the DCC1545M or DCC1645C, to be used with lenses designed for C-mount camera bodies by extending the flange-to-sensor distance by 5 mm.
